Subject: Product support plan for EGS-01 control.

The Woodward EGS-01 control has been a very important product line for many years. However, due to component obsolescence, Woodward is no longer able to produce new controls. Woodward has released the EGS control system that has enhanced capabilities for new applications. This control has been on the market in trials for one year with positive field experience. For existing applications, Woodward is offering a replacement exchange program. Please refer to the support program schedule below.

Please contact you local Account Manager to get more information on the new product or the replacement exchange program.

Now June, 2008
Limited new sales to Customers
Unlimited Repairs
Replacement Exchange with Service Stock

June, 2008-2011
Unlimited Repairs
Unlimited Replacement Exchange

After June 2011*
Limited Repairs
Limited Replacement Exchange

*Based on availability of components

Parts obsolescence from electronic manufacturers can present a challenge to post-life plans. Woodward strives to hold inventory, or look for alternative parts when components are obsoleted. However, there are times when components can simply not be obtained and where sufficient last-time buys cannot be made. In these cases, Woodward cannot always guarantee that we can maintain the rationalization support plan.
