

Control Systems Health Check

10 Step Maintenance Program

GCS Service Engineers perform a control system health check to identify potential problems *BEFORE* they cause costly downtime.

After a comprehensive review of your control system, a **GCS** service engineer will create a thorough inspection report containing details about governor and auxiliary equipment usage, settings and linkage. We will work with your team to create a plan to tackle potential problems so you can make informed decisions about your governor and control system. **GCS** governor experts will recommend service and replacement options to support your needs, ensuring your system keeps running at optimum performance.

The following is a list of what you can expect from the GCS service engineer during his service visit.

- ▶ Document part numbers and serial numbers of all governor and governor auxiliary equipment.
- ▶ Document governor running hours if available and inspect condition of governor oil.
- ▶ Inspect internal components to ensure governor does not have any immediate repair needs.
- ▶ Inspect all governor and fuel pump linkages and pins for excessive wear.
- ▶ Tune dynamics on governor for optimum performance as well as document parameters as applicable.
- ▶ Educate personnel on proper installation and set up of governor system.
- ▶ Assist customer with any immediate concerns or needs on their control system.
- ▶ Provide customer with a recommended spare part bill of material.
- ▶ Provide customer with recommended upgrade if customer's equipment has been discontinued.
- ▶ Provide customer with a complete service report for recommended, immediate or future services.
